# DAQ

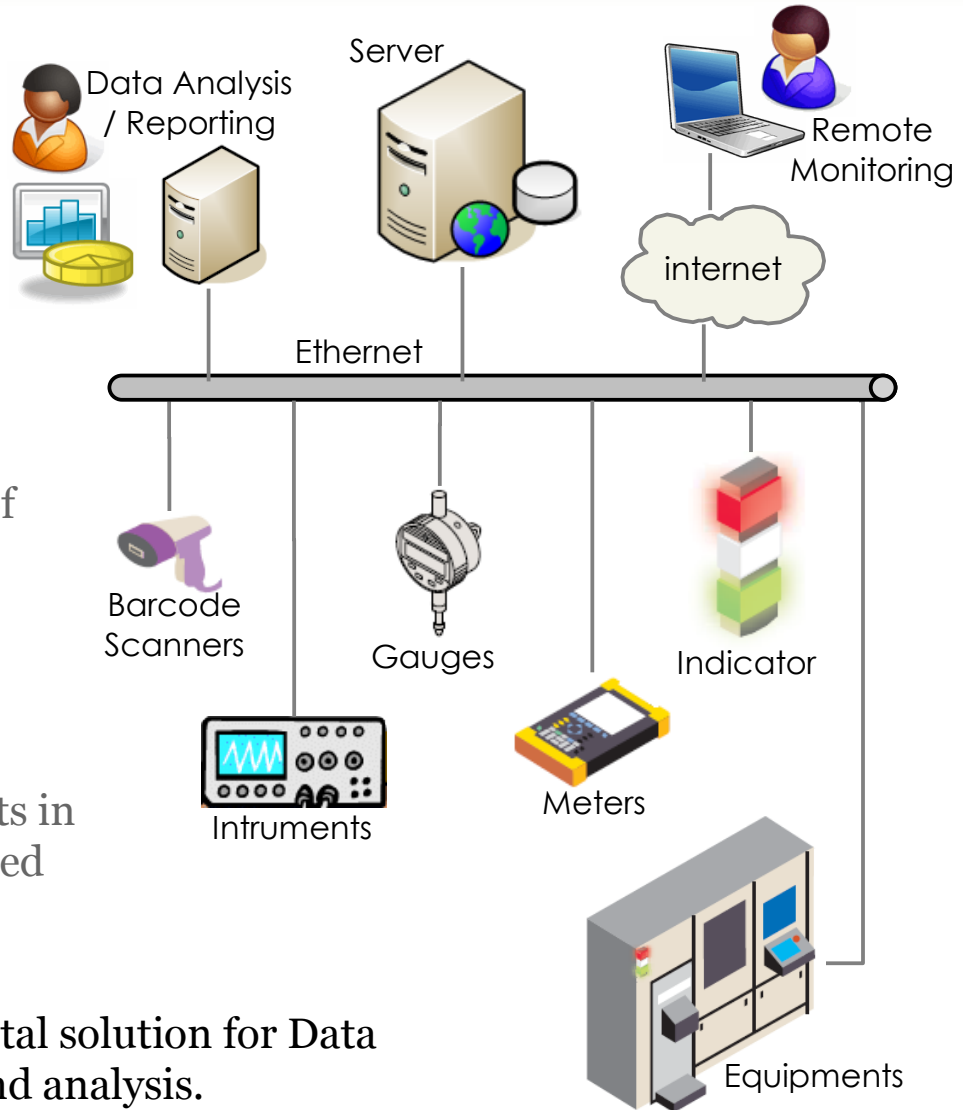

## Data Acquisition

There are huge amount of data in the plant that are meaningful and useful for process control, quality monitoring as well as traceability.

These large amount of data should be made manageable, easily accessible and presentable in meaningful and comprehensive reports in efficient and automated manner.

Silkron DAQ is the total solution for Data Acquisition (DAQ) and analysis.

Our field-proven platform manages huge data from the process, equipments, testers and measurement tools. The users can collect process and test data automatically from the plant for statistical process control (SPC) analysis and monitoring.

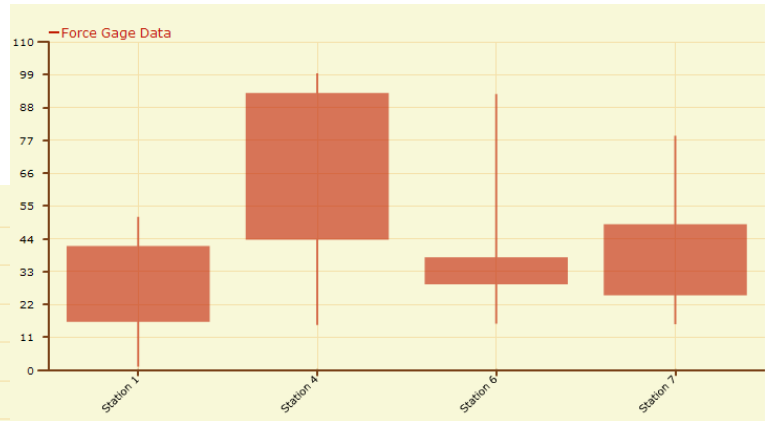

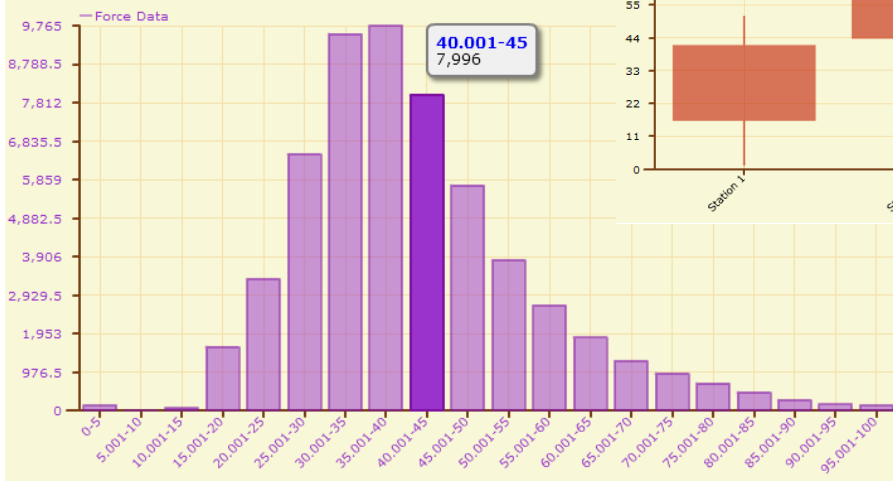

## FEATURES HIGHLIGHT

- ✓ Real-time monitoring with control limit
- ✓ Out-of-Control event triggering with alerts and machine auto-stop.
- ✓ Measurement data with barcode ID and station identification for tracking purposes
- ✓ Data analysis including Statistical Process Control (SPC)
- ✓ Graphical and tabular analysis
